Kids need to learn how to use
the printer before they can
learn how to manipulate and
change the object.

Some things work well. Learn
how to figure out which files
will print and which will not.

Name printers by serial number, color and given name.

I can run however many printers I want off one computer. Use hubs.

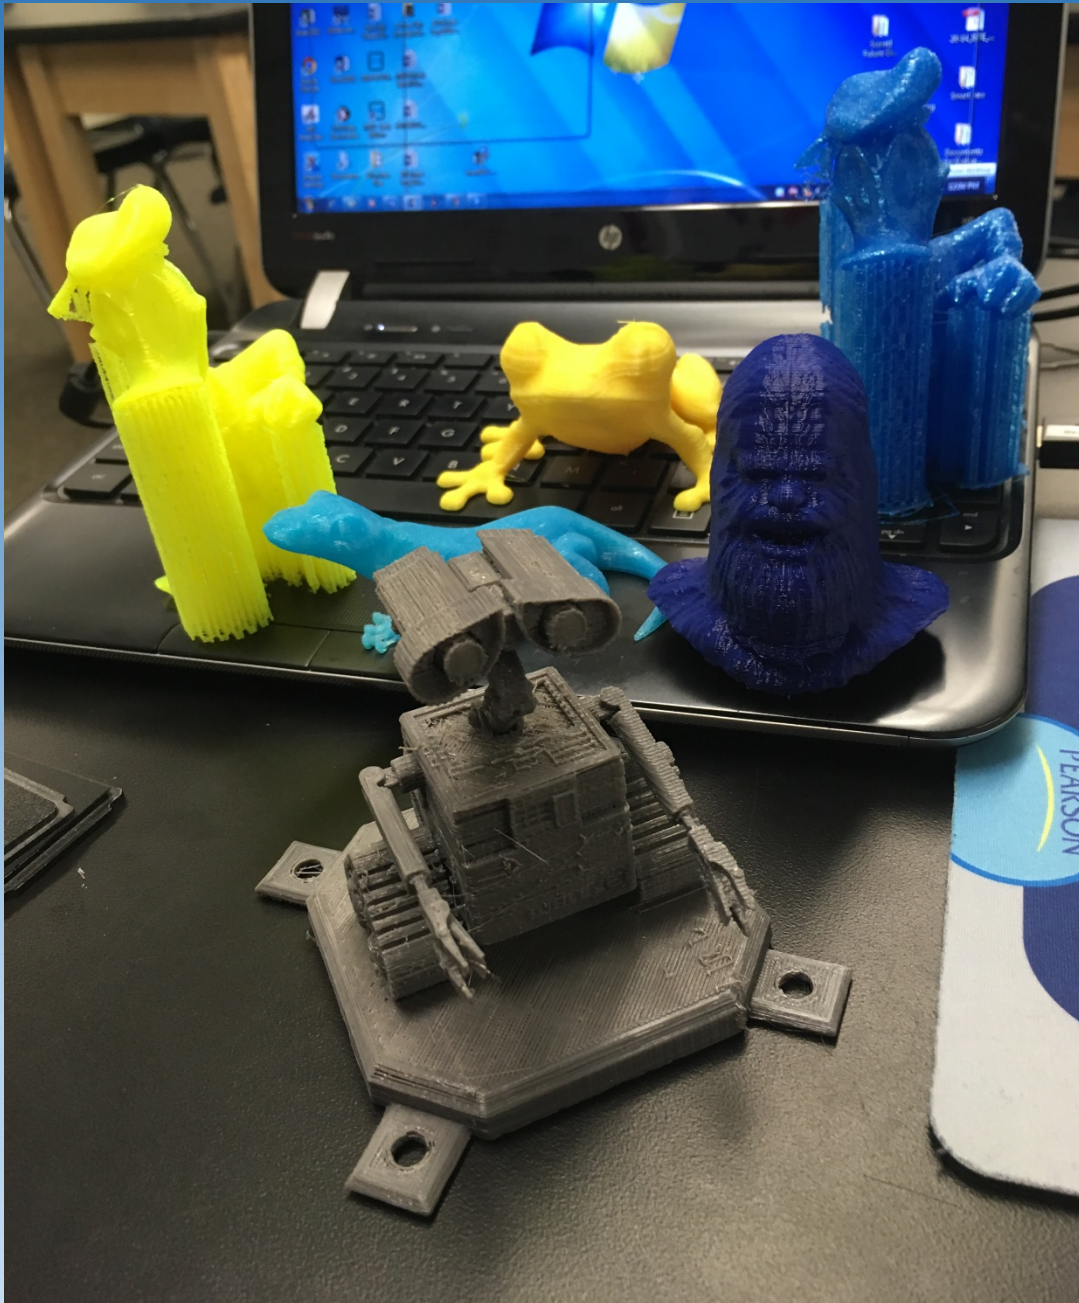

M3D does not use proprietary filament. Any 1.75 mm filament works.

I prefer PLA. Prints seem to turn out better.

Portable, easy to fix if needed.
Customer service is outstanding. I use email. Respond in +/- 24 hours.

Tell M3D you are an educator. They will work with you.

Kids need to learn how to use the machine, then teach them how to manipulate the object.

Learn how to know which files will print well.

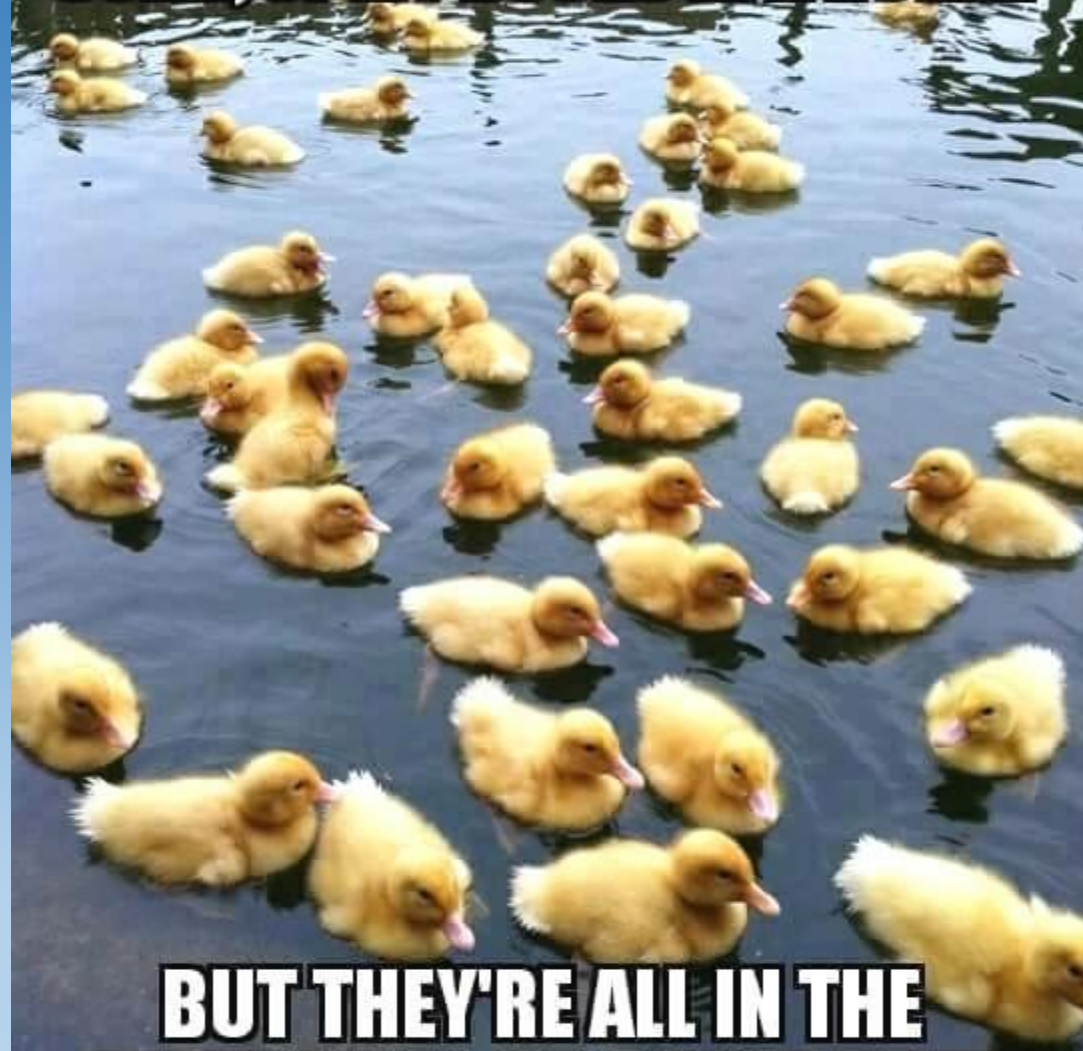

Some turn out perfect.

Some not so much.

This was not a file issue. This was slippage on the build plate.

**I DON'T HAVE ALL, NOT EVEN
SOME, OF MY DUCKS IN A ROW....**

**BUT THEY'RE ALL IN THE
SAME POND, SO I HAVE THAT
GOING FOR ME, WHICH IS COOL.**
